BETTER CLOUD BETTER BUSINESS

Cloud is a compelling concept: build exciting new offers, get to market faster, and save money. So why isn't everyone doing it? Because the road from here to there is rarely straight and clear.

We know how to navigate the roadblocks – how to get from where you are now to where you want to be. And we've put all that knowledge into a single offer: the NKE Technica Cloud Services.

It helps you migrate workloads to the cloud, develop new services natively in the cloud, and manage a hybrid cloud estate with multiple providers. We've worked with a wide range of partners to assemble the tools you need, so the platform itself is technology and vendor agnostic. It's a route to the freedom of the cloud, not to enterprise-stifling lock-ins.

OUR CLOUD PLATFOM

The NKE Technica Cloud Platform is a portfolio of cloud services and accelerators that enables you to migrate, operate, and innovate every aspect of your business in the cloud.

NKE technica

It's difficult to find truly cloud-first organizations because there are significant barriers to entry: skill shortages, shadow IT uncertainties, legacy technologies, and the sheer technical and operational complexity of moving to a new way of doing business. IT leaders are struggling to find a standard way of running their businesses in the cloud and putting new business ideas into production. Limited IT budgets that also need to stretch to maintain inflexible legacy systems aren't helping. The first enterprises to overcome these obstacles and lead the way in the cloud have won a powerful advantage. How do you join them? Where do you find the cloud services and platform engineering skills you need?

NKE Technica is your ultimate answer.

NKE technica

Migrate

Our end-to-end methodology delivers apps migration to the cloud in four phases encompassing discovery, assessment, preparation, and migration.

During this process our clients benefit from:

- **Workload-centric assessment** Our unique economic Application PortfolioManager (eAPM) assesses all aspects of your portfolio to ensure your migration plan is optimized for each application and mapped to your business objectives. This tool delivers a full-stack view of your entire application portfolio. It will assess the portfolio and propose the right migration methodology and target environment for each app. This capability enables you to benchmark your IT performance across industries, geographies, and IT organization sizes.
- **Robust migration methodology** we adopt an industrialized approach to the multiple migration options available, supported by a highly automated migration capability to reduce business impact and optimize success rates. Our holistic and thorough preparation ensures a successfully executed migration that delivers a strong ROI. In addition, strong governance and reporting from start to finish help to ensure the transparency of the process and enables you to govern and manage risks more effectively.
- **Application modernization** A flexible approach based on industrialized and fully automated processes in our Cloud Migration Center streamlines much of the application migration testing and enables us to support multi-vendor ecosystems during application transformation. We cover the entire value chain – from deploying our own expertise in refactoring and rewriting applications for cloud environments, to working with your application partners.

NKE technica

Client story

A global, next-generation media company upgrades its finance and accounting systems We used NKE Technica's Cloud Platform to help this rapidly-growing company integrate SAP S/4HANA into its business in just five months, delivering real-time transparency of project spend, revenue predictions, and more across its
diverse project scope.

NKE technica

Operate

Seamlessly integrate your legacy IT with the cloud using our secure hybrid cloud service, a completely new way to manage your cloud estate. We provide you with the ability to provide services across both public and private clouds and extend many of the benefits of the public cloud across your private cloud estate.

Secure Cloud 24x7x365

Our Cloud Operations Center watches over your cloud environments working in partnership with our cybersecurity teams to safeguard your IaaS, PaaS or SaaS services.

• Advanced user portal

We give your end-users a single place to go to for a range of cloud services – from development tools to prebuilt PaaS and SaaS solutions. The portal provides visibility and control across your public cloud estate and the ability to integrate with your private cloud and legacy platforms as part of a single, integrated solution.

• Cloud Operation Center

The Cloud Operation Center is a hub for all services and support to ensure your cloud systems are available and optimized to meet your business needs.

– Management your workloads in a consistent way, bringing together virtual machines, containers, and functions to work in harmony with your SaaS and on-premises IT

– Monitoring, metric insights, Secure Network Access, OS image management, log management, patch management provisioning, change control, and incident management, as well as all the other tools needed to manage your business in the cloud
